Overview

KF II CPU

Equipment number: 12073663

Description

This Bizerba K-Class Flex II series is designed to meet the demands of modern retail environments, with features enabling accurate weighing, labelling and customer transactions.
Modern design and innovative technology
The Flex II series is powered by a high-performance Intel processor, resulting in a large memory capacity and the ability to provide a variety of innovative features. Furthermore, the device is independent of a specific operating system and is able to support both 64-bit Windows and Linux operating systems. The large RAM provides the memory retailers need to implement new features, such as communicating with customers, advertising products and cross-selling across multiple lines. When combined with the features of the high-end Bizerba software package, stores have access to weighing software, retail apps and a variety of third-party software options.

Product information

Year of construction:	2022
Condition:	Refurbished acc. to Bizerba standard
PRO Version :	No
Voltage variant:	240 V
Location:	Germany
Warranty:	6 month
Material number:	9090995 KH II
